DETAILED ACTION

1. Claims 1-16 are allowed.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

1) The claims are novel: Claims 1-14 (appears to be a typo; regardless, dependent claims 15-16 are allowed because of their dependency) were determined to be allowable by the Board because of the claimed 'modes' limitation (page 9, decision):

wire, modifying the predictions formed in step (1) based on the effects of the aggressor wires only in those categories corresponding to the mode of operation selected by the user." Selecting a "mode of operation" is explained in the Specification:

If . . . the analysis mode is set to pessimistic, and all significant effects on timing are to be taken into account, then . . . [the timing delay is] based on predicted perturbation from "likely" and "possible" data sets. If however the only the most significant perturbances are to be taken into account, i.e. a less accurate method of timing analysis, then . . . the analysis mode is set to normal, and . . . [the timing delay is] based on the predicted perturbation from the "likely" data set

Spec. 7: 6-12. That is, the *modes* are "pessimistic" and "normal," which affect which *categories* of "likely, possible, or unlikely" are used in forming predictions of timing delays.

The Examiner's rejection discusses "categories," but does not address "modes of operation" and accordingly does not respond to Appellant's

An updated search did not uncover these 'modes of operation', as defined above and argued by the board, and in the context of the claims.

2) The claims are statutory: Process claims 1-7, 9, 11-13 were also analyzed under 35 USC 101. It is recognized that, in order to be statutory, a process claim must be 1) tied to a particular machine or apparatus, or 2) it transforms a particular article into

Art Unit: 2128

a different state or thing. *In re Bilski*, 88 USPQ2d 1385 (2008). It is also recognized that a general purpose computer may be converted into a particular computer through the operation of software on the computer. *In re Alappat*, 31 USPQ2d 1545 (1994). For the instant invention, the specification makes clear that the process is carried out via software operating on a computer (at least page 8, lines 3-6). As such, the process is tied to a particular machine, thus meeting the *Bilski* test." Page 8 of the specification discloses:

It will be understood that the method illustrated in figures 4, 5 and 6 will be carried out on a computer system of the type used in analysis of integrated circuits and that the computer system will have modules added to it corresponding to the various method steps illustrated in figures 4, 5 and 6.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
